Project Initialization and Planning Phase

Date	28 September 2024
Team ID	Ramya.G
Project Name	Healthy:-HP - A Mobile Plan for your Health & Quality Routine
Maximum Marks	5 Marks

Define Problem Statement (Problem / Problem Statement / Problem)

Create a mobile application that helps users maintain a healthy lifestyle by providing personalized workout plans, nutrition guidance, and daily health tracking. The app should be easy to use, motivate the user, and adapt to their goals and progress. It should also include reminders for water intake, sleep, and regular check-ups. The goal is to improve overall health and well-being by making fitness and healthcare simple, accessible, and consistent.

Example:

Problem Type	Issue (Description)	Priority	Goal	Solution	Why it should matter
P1	A user is not sure about what workout to do.	Create a simple and personalized plan.	Help users get personalized workout plans based on their goals.	Build workout plans with levels (beginner, intermediate, expert).	Confusion will reduce motivation and delay progress.
P2	A user may forget to drink water or track meals.	Essential for maintaining good health.	Provide reminders and easy tracking for water, meals and sleep.	Send reminders, allow meal logging, and track sleep patterns.	Awareness and consistency lead to better health.

Proposed Solution: An all-in-one mobile application that offers personalized workout plans, nutrition guidance, daily tracking, and reminders for water, sleep, and health check-ups. The app will be simple to use, adaptable to the user's goals, and designed to keep users motivated and consistent, ultimately helping them achieve a healthier lifestyle.
